The Wedding Project

Planning a **wedding** is very intimidating for most people. Why?

- People generally get married very seldom in their life
- Marriages are very expensive in terms of time and money
- Marriages are very public with lots of "performance pressure"

So, many people use a Wedding Planner. These are (usually) very capable people with the experience of hundreds of weddings to draw upon to help you. But knowing a little about what they have to deal with will result in a much smoother wedding for you…and maybe even get you a better price from the planner!

TASK ONE

Develop 100 Tasks

Wedding Project – TASK 1

Your job today is to create an MS-Project to help plan a Wedding.

A well-developed project usually has at least **100** distinct tasks.

But, the file **WEDDING_WBS.xlsx** has only **80** tasks.

So, your **first** task is to add tasks until you have reached **100**.

TASK TWO

Organize The 100 Tasks

香港理工大學

Wedding Project – TASK 2

A well developed project has its tasks grouped in a logical way.

This enables the Tasks to be organized in such a way that their relationships may be more easily observed, and their potential sequencing be the most optimal.

Your **second** task is to us MS-Project (or the software of your choice) to group the Tasks into a 2-tier High Level Deliverables Network that achieves the Scope statement: **"Get Married"**.
